Database: SQL, MySQL, PostgreSQL, MSSQL

PROJECTS & EXPERIENCE

Flexible Workplace Location Tool   October 2022
Capstone Project for Interior Health   - Present

- Developer for a data driven form submission and reviewing platform to streamline the application process of working from home for Interior Heath.
- Created reusable front end components for displaying relevant and concise information.
- Created RESTful API functions in the back end following MVC patterns.
- Followed client coding standards and best practices, such as code style and self-documenting code.
- Worked in a group of 10 following Agile Methodologies, planning and meeting sprint goals, providing accurate time/effort estimates of tasks, and tracking user stories through Jira.
- Built using Blazor WebAssembly, C#, ASP.NET Core to allow for easy integration with existing client infrastructure.

Personal Website   January 2023
Personal Project

- Developed and designed a website to show off past work.
- Built using React and Node.js, hosted on AWS, to take advantage of a reliable and well documented tech stack.
- Implementation of a clean and responsive UI to work on all sorts of devices.

Interactive Infographics   January 2021
Course Project for Checklick   - April 2021

- Created live interactive graphs for users to track athlete performance instead of generating static PDF files that could take several minutes to complete.
- Adapting and responding to changing requirements, like prioritizing which graphs needed to completed first before the deadline.
- Working with the client to establish realistic project deliverable so that there is no surprises when it comes time to turn over the project.
- Demonstrated strong ability to learn new technologies quickly, such as Ruby and Ruby on Rails.
